

Senior Web Designer (Web design\Arts\HCI)

Infotex is seeking a Senior specialist to design and evaluate their front end web based systems. The specialist will be member of a development team and will lead the development of the user experience and provide usability and interaction design insights across a variety of use cases and user profiles. The Designer must be able to understand the needs of the target users and incorporate principles for maximizing the usability and optimizing the user experience.

Other Responsibilities:

- Design user interface and Web sites and ensure that they are visually effective and easy to access
- Other responsibilities may include (based on the skills)
 - o Organizes, utilizes and reports usability evaluations
 - o Research audience characteristics and conduct competitive analysis
 - o Organize sites' content and functionality by creating site blueprints
 - o Define navigation systems that are logical and consistent and support users' needs
 - o Analyze, develop and refine user tasks/processes

Minimum requirements:

- A strong online portfolio displaying user-centred design, and ideally some experience with web database solutions.
- Ability to Hand Code with Blend (Silverlight), HTML tools (e.g. Strong knowledge of Dreamweaver), Image processing tools (e.g. Photoshop).
- An Art, Design or Media based Honours Degree
- In depth knowledge of current web-design trends and techniques.
- A flexible attitude with proven experience of working in a small team.
- Excellent interpersonal, communication and presentation skills/ Good English communication and cross-group collaboration skills
- Exceptional attention to detail
- Experience providing advice and guidance to colleagues.
- Ability to understand and integrate new ideas and technologies.
- Ability to multitask, troubleshoot and resolve problems.
- Ability to work under minimum direction and use independent judgment in decision-making
-

The following will be considered as an advantage:

- Experience in competitive and complementary products/experiences analysis and ability to bring new ideas to team
- Experience in Human-Computer Interface, Information Technology or related field

- Three to five years experience in any of the following disciplines: Information Architecture, Human-Computer Interface (HCI), User Interface Design (UI) and Web Site Usability. Proven track record in designing, documenting and delivering high-quality solutions. Portfolio of interaction design work for at least three web-based applications with a clear description of role on each sample
- Experience and working knowledge of modelling techniques, taxonomy/information organization and structuring, software interface design, usability studies, focus groups, business process analysis and documentation, Web analytics software packages (HBX, WebTrends, Omniture)
- Expert level knowledge of low fidelity prototyping tools and web specific technologies, such as MS Visio and Macromedia.
- Technical understanding of Internet related technologies: database structuring and content management and knowledge management software

This position provides optimal room for advancement and unlimited potential for career development. infotex is fast growing and interested in the growth and success of its employees.

Compensation:

€20,000 – €40,000 annually based on qualifications
